Sample Analysis Prices

The current prices for common quantities of samples are listed below. Prices may vary for large sets and contractual work. Please contact us for more information.

Description	Type	1-5	6-25	Over 25
OC/EC/CC Analysis	Quartz-Fiber Filter	\$75.00	\$60.00	\$55.00
OC/EC/CC Analysis	Glass-Fiber Filter	\$80.00	\$65.00	\$60.00
Total Carbon Analysis	Aluminum Foil	\$70.00	\$65.00	\$60.00
Total Carbon Mass Fraction	Bulk Sample	\$125.00	\$125.00	\$125.00
Total Carbon Analysis	Quartz-Fiber Filter	\$65.00	\$60.00	\$50.00
Total Carbon Analysis	Glass-Fiber Filter	\$70.00	\$55.00	\$50.00
IMPROVE-A Analysis	Quartz-Fiber Filter	\$85.00	\$75.00	\$65.00

Sunset Laboratory also provides pre-cleaned (*sterilized & muffle @700C*) quartz sample filters that can be used for the sample collection. We can provide 25mm, 37mm or 47mm quartz-fiber filters in petri-dishes, and 37mm filters in three-piece plastic cassette samplers. For any size of filter in the petri dishes, the cost is \$5.50 per filter and minimum orders of 10 filters are preferable. For the 37mm filters in the plastic three-piece cassettes, we accept minimal orders of 5 and charge \$10.00 each. All of our quartz filters provided are packaged in the petri dishes or cassettes, upon which point they are ready for sample collection. Filters will be shipped the day after confirming an order. For ordering or information please contact us at ben@sunlab.com.

Results and Turn-Around Time

Sample sets containing less than 25 samples can usually be analyzed and reported within one to two weeks, and sometimes can be reported within the same week they are received. Larger sample sets may take longer depending on current workloads and the amount of samples sent. Larger sample sets should be scheduled ahead of time so that results are obtained quickly. Sunset Laboratory typically performs 100-200 OC/EC analyses per week.

Results are reported as micrograms per square cm of the filter deposit for each carbon species-elemental, organic, and inorganic carbonate (*if present*). If the customer provides sample volume data (*i.e. deposit area, total volume, flow rate & time, etc.*) Sunset Laboratory will calculate additional results incorporating volumetric parameters. A printed copy of the results is sent by mail or fax. In addition, results can also be obtained as a data file on a floppy disk. The file can be sent as an Excel spreadsheet or other spreadsheet formats (**.csv or *.txt*) as an email attachment. When ordering, please let us know about the report formats you need.

Contact Sunset Laboratory for ordering or more information on prices and procedures.
